

Your Own Toll-free One Phone Number for All Calls

- Tim Johnston, CAC Relay Services Support

- Imagine you have only ONE PHONE NUMBER for all VOICE, TTY and FAX calls -

Really, it can be just one phone number for all calls received?!

Yes, that is true! You can obtain your own toll-free phone number. You would simply just go to the website www.nextalk.net to sign up for a new account, download free NexTalk™ software and obtain ONE*NBR at no charge.

One more wonderful benefit is that you can always get a message forwarded to your personal email or pager address if you miss the call!

Suppose you are at the doctor's office and you wanted the doctor or nurse to call you to let you know the lab results of your blood work. You can simply give your own ONE*NBR for both voice and fax calls to let you know of the results and send a fax of your blood work result.

Suppose you are looking for jobs. You can confidently put down your own ONE*NBR on your Resumé or job application form for all voice, TTY and fax calls. You will never miss a message from the recruiters even if you miss answering the call.

Suppose your friend has an old TTY. You can receive a TTY call by having your friend dial your ONE*NBR. Also, you can easily call your friend's TTY number from NexTalk™ software! (Text calls can be made between NexTalk™ users.)

You can give your ONE*NBR to anyone – your hearing parents, relatives, boss/supervisor, doctors, lawyers, job recruiters, neighbors and your deaf and hearing friends!

Now with ONE*NBR you can receive:

- *TTY calls...*
Incoming text calls can come from a TTY or a NexTalk user. The text calls are sent to your NexTalk software. If you miss answering the call, a text message is taken and can be forwarded to an email or pager address.
- *Fax machine calls...*
Incoming fax calls are detected and accepted by ONE*NBR. You will receive an email with "You have a fax message." You can view your faxes in NexTalk software. *(Note: you can't use NexTalk software to send a fax.)*
- *Voice calls...*
If you need relay services for voice calls. ONE*NBR will bring a relay operator for either VRS or text relay onto the call automatically! If you miss the call, the voice caller is connected to a relay operator and can leave you a message which can be forwarded to an email or pager address.

Additionally, when you receive a voice call, you have choices in how to answer by choosing text relay or video relay using either webcam or videophone!

ONE*NBR is a **Toll-free** number that can be called by voice callers, TTY callers and FAX. You can use your existing videophone with your ONE-NBR.

Visit www.nextalk.net for more information about ONE*NBR, Nextalk™ software and how video relay can work with NexTalk software. Email address is info@nextalk.com.

The ONE*NBR service supports both text relay through URrelay and video relay (VRS) through CACVRS. Check URrelay at www.urrelay.com or CAC at www.cacrely.com for details.
